DETAILED ACTION

The examiner acknowledges a submission of the preliminary amendment filed on 6/15/2006. The amendments to the claims are accepted.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-30, 52 & 53, drawn to a plural supply power system, classified in class 307, subclass 66.
- II. Claims 31-51, drawn to a method of power and data transmission over a single-wire, classified in class 307, subclass 4.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another and materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the plural supply power system does not require the use of the single wire power and data transfer of group II but could instead use separate lines to transmit information as is readily known in the art. Furthermore, the method of data and power transmission over a single wire does not require the particulars of the power

Art Unit: 2836

supply system of group I and could be used in any number of power supply systems well known in the art which use circuitry that requires both power and data.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
